

Know your Soil and Composting

Adult

The soil is vital to the healthy growth of your plants. If you have a knowledge of how the soil and plants interact then it is possible to improve the growth of your plants.

This course will give you an introduction into a range of soil characteristics and an opportunity to test some of these including the texture, pH, organic matter content and the nutrient values.

Also, how to create and use compost from recycled plant material. How to construct a successful compost heap and how best to use it in the garden.

This course is recommended for anyone who is interested in growing fruit and vegetables.

Also for new gardeners or those working in the industry wishing to know more about the soil.
